

LON door installation modules

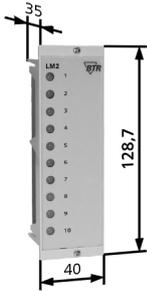

LM2

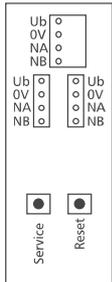

indicator module, 24 V DC

Part number
110 392 25

Dimensions - E19 housing

Wiring

Use

Indicator modul with 10 LEDs for 19" frames. Suitable as annunciator module in cabinet doors or remote control panels.

Functional description

In a LON installation the different LEDs are activated by the network variables SNVT.

LON interface

transceiver	FTT10A free topology
neuron	3120, 3k EEPROM downloadable
data format	standard network variables (SNVT)
transmission rate	78 kBit/s
max. length (see page 7)	
line topology	2700 m / 64 nodes
free topology	500 m / 64 nodes
cablings	twisted pair

Application software

XIF and NXE files are available as downloads under www.btr-electronic-systems.de.

Technical data

Housing

dimensions b x h x w	40 x 128.7 x 35 mm (3HE; 8 TE)
weight	66 g
mounting position	any
mounting	in 10" or 19" frames according to IEC 297-3 (accessories page 88 P/N 110361 or 110362)
material	housing ABS
type of protection (DIN 40050)	IP20

Terminal blocks

supply and bus	1.5 mm ² pluggable jumper plug (included to packing)
----------------	---

Supply

operating voltage range	24 V DC ± 15 %
current consumption	53 mA
duty cycle	100 %
recovery time	500 ms

Temperature range

operation	-5 °C ... +55 °C
storage	-20 °C ... +70 °C

Protective circuitry

operating voltage	polarity reversal protection
-------------------	------------------------------

Display

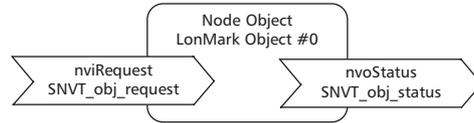

10 LEDs, adjustable to red, green, yellow

If a LED is adjusted to yellow for acknowledgment (17,0 0) the system will identify this as a maintenance signal and interpret it accordingly at the LM1 module (annunciator module for message collection). If a LED is adjusted to flash red, to acknowledge and to unlock (52,5 0) this is identified as a failure message and interpreted accordingly at the LM1 module.

LON door installation modules

Description of the LonMark objects and network variables

LM2

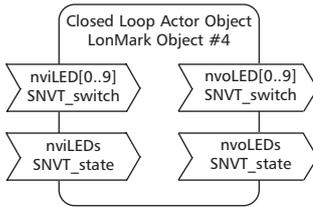

Node Object

The Node Object monitors and controls the functions of the different objects in the device. It supports the basic functions Object Status and Object Request required by LonMark.

Application Objects

The objects contain the functions for status visualization.

LED Object

LED Object

nviLED[0..9] (index 2 .. 11)

SNVT type

SNVT_switch

Function

switching of the LEDs

nviLED[0..9] = 0.0 0

the LEDs adopt the status defined by nciLEDAus[0..9]

nviLED[0..9] = 100.0 1

the LEDs adopt the status defined by nciLEDein[0..9]

nvoLED[0..9] (index 12 .. 21)

SNVT type

SNVT_switch

Function

feedback to nviLED[0..9], value of nviLED[0..9] is transmitted

nviLEDs (index 22)

SNVT type

SNVT_state

Function

switching of the LEDs

nvoLEDs (index 23)

SNVT type

SNVT_state

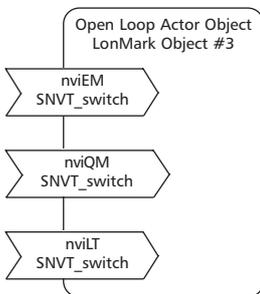

Function

feedback to nviLEDs

Assignment

nvoLEDs.bit0 = LED1 ... nvoLEDs.bit9 = LED 10

Extern Object

Extern Object (externe Meldungen)

nviEM (unlock signal) (index 24)

SNVT type

SNVT_switch

Function

If nviEM gets value 100.0 1, the LM2 is unlocked and nvoBTR.bit13 is set.

nviQM (acknowledgement signal) (index 25)

SNVT type

SNVT_switch

Function

If nviQM gets value 100.0 1, the LM2 is acknowledged and nvoBTR.bit14 is set.

nviLT (lamp test) (index 26)

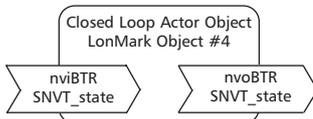

SNVT type

SNVT_switch

Function

If nviLT gets value 100.0 1, a lamp test is carried out at the LM2 and nvoBTR.bit15 is set.

BTR Object

BTR Object

nviBTR (index 27)

SNVT type

SNVT_state

Function

System object for Logline LON door installation modules to provide simple connection to the annunciator module for signal collection LM1.

Bit0 .. Bit8

not used

Bit9

automatic operation in the system = 1; manual operation in the system = 0

Bit10

new failure signal in the system = 1; no or acknowledged failure in the system = 0

Bit11

new failure signal in the system = 1; no or unlocked failure in the system = 0

Bit12

maintenance signal in the system = 1; no or acknowledged maintenance in the system = 0

Bit13

unlocking signal of the LM1, is set to 1 by unlocking tact switch

Bit14

acknowledgement signal of LM1; is set to 1 by the acknowledgement tact switch

Bit15

request of the LM1 for lamp testing; is set to 1 by the lamp test tact switch

nvoBTR (index 28)

SNVT type

SNVT_state

Function

Feedback to nviBTR, value of nviBTR is transmitted. If a LED that is specified as maintenance signal (yellow LED requiring acknowledgement) is set by nviLED[x], nvoBTR Bit12 changes to 1.

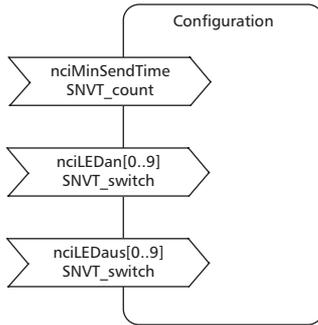

If a LED that is specified as failure signal (flashing red LED requiring acknowledgement and unlocking) is set by nviLED[x], nvoBTR Bit10 and Bit11 change to 1.

LON door installation modules

Description of the LonMark objects and network variables

LM2

Configuration variables

Configuration Variables

nciMinSendTime (index 29)

SNVT type

SNVT_count

Function

All output variables nvo described above are issued even without a status change at the end of a preset period of time. Thus the device reports periodically to the system.

Time settings

0 timer turned off
1 .. 60 timer time in seconds (factory setting 0)

nciLEDan[0..9] (index 30 .. 39)

SNVT type

SNVT_switch

Function

Setting of status and colour of each LED by nviLED[0..9] = 100.0 1

LED settings

nciLEDan[0..9].value = a + b + c + d
nciLEDan[0..9].state = 0

a - colour	b - flash	c - acknowledge	d - unlock
0,5 red	0 = no	0 = no	0 = no
1 yellow	4 = yes	16 = yes	32 = yes
1.5 green			

Examples see chart page 76.

nciLEDaus[0..9] (index 40 .. 49)

SNVT type

SNVT_switch

Function

Setting of status and colour of each LED by nviLED[0..9] = 0.0 0

LED settings

see nciLEDan[0..9]
for example LED off nciLEDaus[0..9] = 0.0 0

Note:

The variables with index 29 to 38 are not annotated.
